PRODUCT PITCH · MAY 2026

THE HUMAN LAYER OF VOICE AI

Voice intelligence meets human intuition.

FOUNDATION MODEL · LIVE

SONA V1 · SHIPPED Q1 2026

75+ BIOMARKERS

amplifierhealth.com

Most AI hears words.
We hear people.

Your voice product captures hours of audio every day. You see the transcript. You miss the breath, the strain, the cognitive load — every biological signal in *how* the person is actually speaking.

That's the gap. Transcription has scaled to commodity. The biological layer beneath it is still missing — and it's the layer that explains what's actually happening with the person on the line.

Four shifts converging as we speak.

01

Voice agents at production scale.

Vapi, Retell, Cartesia and ElevenLabs all crossed into real production volume. AI voice agents are answering enterprise calls at scale.

$2B+ raised across voice infra · 2024–25

02

Transcription is commoditizing.

Deepgram, Whisper, AssemblyAI, OpenAI Realtime — five-cent-per-minute transcription is table stakes. Providers need new differentiation.

Value moves up the stack · biomarkers next

03

MCP standardizes agent tooling.

Model Context Protocol turned tool discovery into infrastructure. Every MCP-enabled runtime can discover and call biological awareness natively.

Native distribution to every agent

04

Clinical AI budgets unlock.

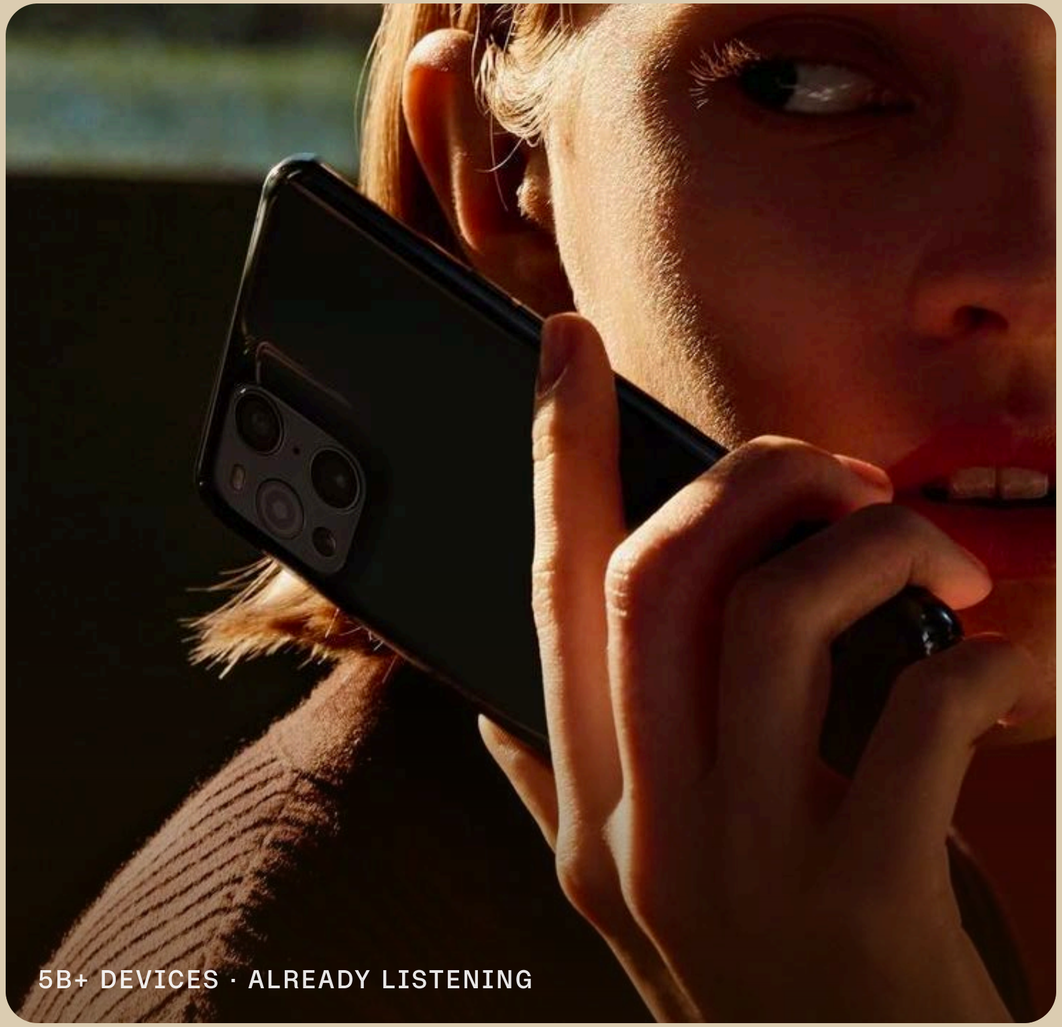

CMS codes for digital therapeutics. AI scribe adoption crossed 40% in major health systems. Payers are funding passive screening at scale.

Pilot-to-deployment · 2026

Every microphone is already a clinical-grade sensor.

Voice is the most under-instrumented vital sign of the modern era. Every device already captures the breath, prosody, and articulation patterns medicine has spent a century learning to read.

Breath cadence	14.2 BPM	Vocal tension	STRAIN INDEX
Micro-pauses	COGNITIVE LOAD	Pitch contour	F0 VARIANCE
Articulation	PRECISION	Prosody shifts	AFFECT WINDOW

Built for teams shipping voice products today.

01

Voice AI infrastructure

ASR, TTS, RTC and agent platforms at scale. Embed biological awareness as the differentiation layer.

SONA · SIGNS · MCP

CTOS · VPS PRODUCT

02

Telehealth & behavioral health

Digital therapy, telepsychiatry and ambient scribe platforms. Passive screening validated against PHQ-9 / GAD-7.

HAVEN · PULSE

CMOS · HEADS OF PRODUCT

03

Workforce wellness & EAP

Employee mental health, manager check-ins, burnout monitoring. The passive layer surveys can't capture honestly.

PULSE · HAVEN

CPOS · WELLNESS CTOS

04

Customer experience

Sales coaching, call analytics, contact-center QA. Add cognitive load, stress and authenticity to every call.

CLARITY · APEX · PULSE

VPS REVENUE OPS

05

Consumer wellness

Longevity, fitness, women's health, recovery. Clinical-grade awareness in mass-market wearables and apps.

What partners ship.

VOICE AI INFRASTRUCTURE	A differentiation story your customers can't get from LiveKit, OpenAI Realtime, or Twilio.	SONA · SIGNS · MCP
TELEHEALTH & BHI	Passive screening at every session — without a single survey question.	HAVEN · PULSE
WORKFORCE WELLNESS / EAP	Continuous burnout signal across your workforce — data surveys can't reach.	PULSE · HAVEN
CUSTOMER EXPERIENCE	Cognitive load, sentiment, authenticity and stress on every recorded call.	CLARITY · APEX · PULSE
CONSUMER WELLNESS	Whole-body health insight from a consumer microphone.	PULSE · ARIA · APEX

The layer that makes voice AI biologically aware.

A foundation model that turns any voice stream — call audio, ambient mic, agent dialogue — into a structured layer of human signal. Hearing words is the first step; understanding the person is what closes the loop.

ONE FORWARD PASS · 6× REAL-TIME RESPONSE

TRAINED ON 1.5M DOCTOR-PATIENT ENCOUNTERS

Sona. The foundation model for human voice.

1.5M	843K	75+	17	8
DOCTOR-PATIENT ENCOUNTERS IN TRAINING	UNIQUE US INDIVIDUALS · REAL-WORLD	CONDITIONS ACROSS FIVE DOMAINS	CANONICAL SIGNS EXPOSED AS APIS	USE-CASE MODELS · ONE CALL EACH

ARCHITECTURE	*Acoustic foundation model · proprietary*	PRODUCTION	*Sona v1 · shipped Q1 2026*

REPLACES	*8 individual models, prior generation*	DEPLOYMENT	*REST · MCP server · on-prem path*

Eight purpose-built models. One foundation underneath.

WAVE A · LIVE

Haven

Listens to the signals of emotional wellbeing.

BEHAVIORAL · 6 $0.18

WAVE A · LIVE

Pulse

Reads the rhythm of energy, stress and recovery.

WELLNESS · 6 $0.15

WAVE A · LIVE

Clarity

Listens to the markers of cognitive health.

COGNITIVE · 1 $0.10

WAVE B · Q3 26

Aria

Listens to the rhythms of hormonal health.

WOMEN'S · 7 $0.18

WAVE B · Q3 26

Apex

Listens to the edge of human performance.

PERFORMANCE · 7 $0.18

WAVE B · Q4 26

Tide

Reads the cardiometabolic baseline.

CARDIOMETABOLIC · 5 Q4 2026

WAVE C · Q4 26

Harbor

Listens to the markers of sustained recovery.

RECOVERY · 6 $0.15

WAVE C · Q1 27

Breath

Reads the respiratory signal beneath speech.

RESPIRATORY · 2 Q1 2027

Every model ships above 0.80 AUC.

GROUP-AVERAGE AUC · SCALE 0.70 → 1.00

N = 32 CONDITIONS · VALIDATION COHORT · PRE-DEPLOYMENT

A single call. A structured layer of human signal.

AMPLIFIER · HAVEN

SESSION AMP_4F29 · 16 KHZ

Janet's session.

```

Two minutes from install to first biomarker.

01

Get a key.

Sign up, get an API key. No card for the free tier — 500 assessments on us via Builder Credits.

02

Send audio.

cURL, Python, JS, Go — REST or streaming. WebSocket and webhook delivery for real-time. Same surface across all models.

03

Or use the MCP.

Claude, GPT or Gemini — add the MCP server to your registry. Your agent discovers it natively, no docs required.

04

Ship.

6× real-time inference. Versioned APIs, SLAs, production telemetry from day one.

```

Four things we have that nobody else does.

01

Training data at clinical scale.

1.5M real doctor-patient encounters, ICD-10 coded — to our knowledge the largest US clinical voice corpus in production.

SOURCE · CLINICAL PARTNERS

02

One pass. Many signals.

A single call returns multiple biological signals from one sample — no pipeline of separate models, shared context throughout.

SINGLE-PASS · STREAM OR BATCH

03

Production today. Not a research artifact.

Sona v1 shipped Q1 2026, replacing a stack of 8 models. SLAs, monitoring, versioned APIs — built for partners with real customers.

STATUS · LIVE

04

Agent-ready. AI-native by design.

Headless API and MCP tooling let agents listen, adapt their tone, or escalate based on stress, fatigue or cognitive load heard in the moment.

SURFACE · REST · WEBSOCKET · MCP

Scales with usage. Not seats.

MODEL	VERTICAL	CONDITIONS	PER ASSESSMENT	PER MINUTE
Haven	Behavioral health	6	$0.18	$0.12
Pulse	Wellness	6	$0.15	$0.10
Clarity	Cognitive	1	$0.10	$0.08
Aria	Women's health	7	$0.18	$0.12
Apex	Performance	7	$0.18	$0.14
Harbor	Recovery	6	$0.15	$0.10
Tide	Cardiometabolic	5	Q3 2026	Q3 2026
Breath	Respiratory	2	Q3 2026	Q3 2026
Signs	Single-signal API	17 canonical	$0.04	per call

REFERENCE MATH A telehealth partner running 50,000 Haven sessions / month spends ~$9,000/month — about $108K annually. Growth tier kicks in automatically at 5,000+/month.

Operators, clinicians, researchers, engineers.
